Are you challenged to add capacity because of exploding data growth but you don't have the right tools for effective data storage management?

With our Professional Services and with access to leading storage vendor tools, we can deliver the right solution for highly effective data storage management.

With our knowledge of these storage vendor tools, we can recapture and reclaim storage such as data deduplication. Our Professional Services and management tools deliver more efficient and effective processes to increase density and to provide higher consolidation ratios. These benefits reduce OPEX and provide cost avoidance on CAPEX, enabling you to redirect your budget.

We can plan, design and configure your SANs and LUNs, virtualize your storage, plan, design and configure your backup system or offsite backup—we can cover it all. Our consultants are certified with many major storage software and hardware manufacturers, as well as with complementary products such as VMware, Veeam, and others.

## OUR STORAGE AND BACKUP SERVICES INCLUDE:

- Software Defined Storage
- Storage Infrastructure
- Backup & Restore
- Storage Assessment

Contact us. We can optimize your storage from source, through backups and disaster recovery to archives, resulting in safer data and lower costs.
